Attention:

The module is operated in DE only mode, H sync and V sync input signal have no effect on normal operation.

Note:

(1) Please make sure the range of pixel clock follows the following equations:

$$F_{clk}(max) \geq F_{max} \times T_v \times T_h$$

$$F_{min} \times T_v \times T_h \geq F_{clk}(min)$$

3.5 Power On/Off Sequence

To prevent a latch-up or DC operation of LCD module, the power on/off sequence should be as the diagram below.

Fig. 3.12 Power on/off sequence

Parameter	Values			Unit
	Min.	Typ.	Max.	
T1	0.5	-	10.0	ms
T2	0	-	-	ms
T3	0	-	-	ms
T4	1000	-	-	ms
T5	500	-	-	ms
T6	100	-	-	ms

Attention:

- (1) Apply the light bar voltage within the LCD operation range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily become abnormal screen.
- (2) In case that V_{CC} is in off level, please keep the level of input signals on the low or high impedance.
- (3) T4 should be measured after the module has been fully discharged between power off and on period.
- (4) Interface signal shall not be kept at high impedance when the power is on.
- (5) The product should be always operated within above ranges.

3.6 Flicker Pattern

The Flicker adjustment pattern suggested as below.

Bright sub-pixel=G127(50% grayscale); dark sub-pixel=G0 (0%grayscale)

Fig 3.13 Flicker pattern

3.7 Driver IC ESD spec

If the LCD module is designed with the Plastic Bezel, we suggest ESD protection solutions should be applied to avoid IC damaged, as shown in Fig.3.14.

4. OPTICAL CHARACTERISTICS

4.1 Measurement Conditions

The table below is the test condition of optical measurement.

Item	Symbol	Value	Unit
Ambient Temperature	T_A	25 ± 2	$^{\circ}\text{C}$
Ambient Humidity	H_A	50 ± 10	% RH
Supply Voltage	V_{CC}	12	V

To avoid abrupt temperature change during optical measurement, the measurement should be executed in a stable, windless, in dark room after lighting the light source.

Fig.4.1 Measurement equipment.

4.2 Optical Specifications

The relative measurement methods of optical characteristics are shown in 4.2. The following items should be measured under the test conditions described in 4.1 and stable environment shown in 4.1.

		θ_x-		80	89	-		
	Vertical	θ_y+		80	89	-		
		θ_y-		80	89	-		

Note:

Light source here is the backlight of HKC Module, and film structure is two DOP sheets.

- (1) Each chromaticity coordinates (x, y) are measured in CIE1931 color space when full-screen displaying (Red, Green, Blue, White) and light source is defined by HKC Backlight, measurements shall be made at the center of the panel, and setup of measurement is shown in Fig 4.1.
- (2) The color gamut is defined as the fraction in percent of the area of the triangle bounded by R, G, B coordinates and the area is defined by NTSC 1931 color standard in the CIE color space. Chromaticity coordinates are measured by CS2000 and the standard setup of measurement is shown in Fig 4.1.
- (3) Definition of Transmittance (T%):

The transmittance is measured with full white pattern (L_{max}) at the center of the LCD panel.

$$\text{Transmittance (T\%)} = \frac{\text{Luminance of LCD module}}{\text{Luminance of backlight}}$$

(4) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression,

$$\text{Contrast Ratio (CR): } CR = \frac{CR_W}{CR_D}$$

CR_W : Luminance of LCD module with full screen white pattern (255,255, 255) at center point.

CR_D : Luminance of LCD module with full screen Dark pattern (0, 0, 0) at center point.

Where the measure point of to the Contrast Ratio is the center of the panel

(5) Definition of Response time (Tg):

Average of gray to gray response time (T_g) means the average switching time of luminance ratios among 0%,25%,50%,75%,and 100% to each other and is optimized on frame rate =60Hz.

Measured Response time		To				
		0%	25%	50%	75%	100%

Fig 4.3 The definition of TR and TF

Measured response time is determined by 10% to 90% brightness difference of rising (T_R) or falling (T_F) time.

(6) Definition of Viewing angle:

As Note (4) the static contrast ratio definition, the viewing angles are defined at the angle that the contrast ratio is larger than 10 at four directions relative to the perpendicular direction of the HKC's module (two vertical angles: up θ_{y+} and down θ_{y-} ; and two horizontal angles: right θ_{x+} and left θ_{x-}). The standard setup of measurement is shown in Fig 4.1 & 4.4

7. PRECAUTION

Please pay attention to the followings when a TFT-LCD cell is used, handled and mounted.

7.1 Unpacking

Should use immediately after unpacking TFT -LCD cell to prevent the terminal corrosion.

Protection film for a polarizer on a TFT open cell should be slowly peeled off so that the electrostatic charge can be minimized.

Source PCB should be connected to the ground when peel off the protection film.

The protection film should not be contacted to the driver during peeling off.

7.2 Storage Test

Any attachment on polarizer of open-cell, such as tape, is forbidden and not recommended, especially under the high temperature and high humidity environment.
